The uv installer 紫外线安装程序

Changing the installation path

更改安装路径

By default, uv is installed to ~/.local/bin. If XDG_BIN_HOME is set, it will be used instead. Similarly, if XDG_DATA_HOME is set, the target directory will be inferred as XDG_DATA_HOME/../bin.

默认情况下,uv 安装到 ~/.local/bin 。如果设置了 XDG_BIN_HOME ,则将改用它。同样,如果 设置了 XDG_DATA_HOME,则目标目录将被推断为 XDG_DATA_HOME/../bin 中。

To change the installation path, use UV_INSTALL_DIR:

要更改安装路径,请使用 UV_INSTALL_DIR:

macOS and Linux macOS 和 Linux Windows 窗户 \$ curl -LsSf https://astral.sh/uv/install.sh | env UV_INSTALL_DIR="/custom/path" sl

Disabling shell modifications

禁用 shell 修改

The installer may also update your shell profiles to ensure the uv binary is on your PATH. To disable this behavior, use UV_NO_MODIFY_PATH. For example:

安装程序还可能更新您的 shell 配置文件,以确保 uv 二进制文件位于您的 PATH 上。若要禁用此 行为, 请使用 UV_NO_MODIFY_PATH。例如:

\$ curl -LsSf https://astral.sh/uv/install.sh | env UV_NO_MODIFY_PATH=1 sh

If installed with UV_NO_MODIFY_PATH, subsequent operations, like uv self update, will not modify your shell profiles.

如果与 UV_NO_MODIFY_PATH 一起安装,则后续作(如 uv 自更新)不会修改您的 shell 配置文 件。

Unmanaged installations 非托管安装

In ephemeral environments like CI, use UV_UNMANAGED_INSTALL to install uv to a specific path while preventing the installer from modifying shell profiles or environment variables:

在像 CI 这样的临时环境中,使用 UV_UNMANAGED_INSTALL 将 uv 安装到特定路径,同时防止安装 程序修改 shell 配置文件或环境变量:

\$ curl -LsSf https://astral.sh/uv/install.sh | env UV_UNMANAGED_INSTALL="/custom/p;

The use of UV_UNMANAGED_INSTALL will also disable self-updates (via uv self update). 使用 UV_UNMANAGED_INSTALL 还将禁用自我更新 (通过 uv 自我更新)。

Passing options to the installation script

将选项传递给安装脚本

Using environment variables is recommended because they are consistent across platforms. However, options can be passed directly to the installation script. For example, to see the available options:

建议使用环境变量,因为它们在各个平台上是一致的。但是,选项可以直接传递给安装脚本。例 如,要查看可用选项,请执行以下作:

\$ curl -LsSf https://astral.sh/uv/install.sh | sh -s -- --help

Changing the installation path 更改安装路径

Disabling shell modifications 禁用 shell 修改

Unmanaged installations 非托管安装

Passing options to the installation script 将选项传递给安装脚本
